# London: BSAFE model second time with the International Safety Award 2017

The BSAFE model has won the prestigious International Safety Award 2017 as a recognition for the implementation of the Safety Management System methodology in the new city district development Milan Porta Nuova.

This year, 533 organizations of all sizes and sectors won an the British Safety Council Award, including businesses from the UK, Africa, Asia, India, mainland Europe and the Middle East. BSAFE is for the second time the only Italian organizational model to participate and be awarded May 5 at the Grosvenor House Hotel in London.

The British Safety Council, a British governmental institution founded in 1957 by security experts, assessed the BSAFE model as an advanced engineering method using integrated information systems to govern the complexity of the site through a single strategic coordination system able to integrate and guide the security and emergency activities of owners, tenants, suppliers and visitors in the area.

The BSAFE model is developed by GAE Engineering, one of the leading Italian expertise on security and BFORMS Asset and Engineering Management Company, specialized in real estate management. The annual comparison with the international scenario allows the two engineering companies, which for years have been working in partnership, to consolidate the organizational model according to the most advanced best practices.

The distinctive experience that BSAFE has gained on the Porta Nuova district has begun since the construction site, managed through the participatory security method, and then declined in the management phases according to a single thread. Organizational models must provide responses to these realities in both ordinary and emergency situations.

“We are in a difficult and complex historical period in which the risks to be assessed and managed require constant changes of scale. Although there are still few high-rise buildings in Italy, there is a strong need for Safety for both buildings and people, which must be tackled by applying the best technologies and by providing evacuation tests also for private residents.” says the company’s Technical Director, Giuseppe Gaspare Amaro.

“We wanted to measure ourselves at the international level by working on the concept of security and the applicable models, analyzing processes and identifying new configurations in real estate management services. The implemented models must ensure the management of potential interference with technology support as well as increasingly advanced Risk management and BIM management and systems.” close Francesca Torino, BFORMS CEO.
